Horticultural Services ®

GET READY FOR SPRING!!!

Automatic Irrigation

- Protect your beautifully landscaped gardens by investing in a fully automated Irrigation System.

This will save you Time - by having your controller set, so that watering will take place when best suited or needed. **It will also save you Money\$** - since everything is controlled, programmed and

equipped with rain sensor, every drop of water is used only when needed. In addition, it will help reduce plant/shrub material loss.

Saves Water Use - water is used and concentrated where required which can save between 30 to 50 percent if compared to conventional watering methods. **Improve Plant Growth** - When plants, crops,

lawns or flowers are watered with smaller amounts of water over a longer period of time, they grow faster, for it is the ideal condition for growth. You will enjoy greener and more luscious gardens and lawns.

Outdoor Lighting Systems

- Having an Outdoor Lighting System or Landscape Lighting offers many benefits.

Safety - A well lit walkway will help navigate people safely to other areas of your property. The use of Zone Lighting is effective for illuminating patios, deck, garden, seating areas or pool area.

Security - A well lit landscape or outdoor living spaces can serve as a deterrent to trespassing and theft. The use of motion sensors can be utilized when full system is not in use.

Comfort - Lighting will extend the use of your outdoor space and add comfort and make outdoor entertainment areas more inviting.

Decor - Highlight specific areas, define focal points and pull the eye to display certain areas. Install mood lighting or dimmable lighting to add splashes of light to your place.

Curb Appeal - A well planned and properly installed Lighting will add value to your home and make it more appealing.

Drainage or Water Issue?

- Do you have standing water, ponding, erosion or runoff? Water or drainage problem is a serious threat to your property. It can lead to premature deterioration of concrete, ruin foundations and can be a breeding ground for mosquitoes. But it is also quite easy to spot or identify.

We have been successfully helping residential and commercial properties with their drainage issues and storm water management for over a decade. From Surface Drains to Sub Drains, Pool Drains to Bio-Swales - Using only the latest and best materials available in the market. With proper installation techniques - we can help you redirect water where it belongs. Discharge your downspouts at least 10' feet away from foundation. Your Home is your most valuable investment - Protect it from water potential damage!
